

# CP Secure VPN

## The Instant and Scalable Virtual Private Network

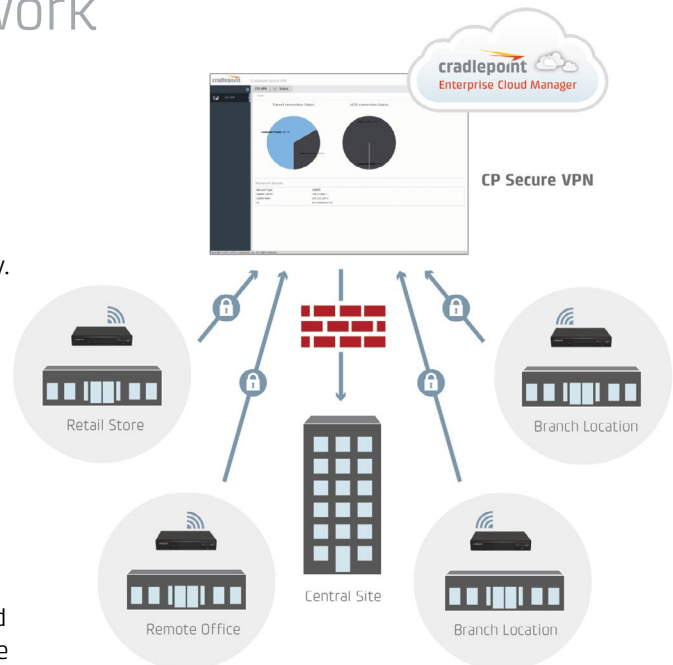

### THE PROBLEM: COMPLEX HARDWARE-BASED VPNS

Back office VPN concentrators are costly and time consuming to deploy. Fixed VPN 'head end' hardware solutions are capital intensive and have long lead times for distributed enterprises. IT managers need to secure their expanding edge networks using architectures that scale quickly and are easy to maintain.

### THE SOLUTION: SCALABLE, CLOUD-BASED SECURITY

Configured, deployed, and managed from the cloud, CP Secure VPN delivers a virtual private data network that minimizes both cost and complexity. Unlike traditional bulky head-end concentrator hardware solutions, CP Secure VPN allows you to:

- + Prevent untrusted access with mutual X.509 authentication on TLS
- + Assign the same IP address to multiple end points for seamless failover in business continuity applications
- + Pay for what you need (new end-points can be set up in minutes with no back office IT effort)
- + Secure back office connectivity with easy-to-use web-based admin tools
- + Rapidly deploy and scale to meet demand – without hardware costs or lead times

### FEATURES:

- + *Secure/private access to your corporate Intranet from branch offices*
- + *Set up/maintain networks in minutes – no special skills required*
- + *Supports any access transport (Wired/Wireless/Metro-E/Satellite)*
- + *Simple console integrated with Enterprise Cloud Manager*
- + *Instantly & infinitely scalable, right-sized for your business needs*
- + *Unique ability to assign the same IP address to multiple endpoints for failover*
- + *Simple NAT VPN or GRE tunnel based VPN for secure edge network*
- + *Use any SIM (carrier agnostic)*

### BENEFITS:

- + *Saves on capital and operational expenses to build & manage complex Head End VPN concentrators*
- + *Simple to set up, easy to maintain sophisticated security controls*
- + *Provides consistent architecture over any network – globally*
- + *Pay only for what you use to match your business requirements*
- + *Manage your network in one place*
